

THE POWER OF ENVIRO-TAB™

FOR CLEANER AIR, WATER & SURFACES

IN A RETAIL
PACK

**ENVIRO-TAB™
HOME CARE
TABLETS**

**ERADICATOR™
TABLETS
by ENVIRO-TAB™**

Before you is probably the most versatile product in the cleaning industry – the **Envirotab™ Home Care Tablet**. These 1 gram tablets are simply dissolved in water to create a solution with many of the properties of common bleach, 4 TIMES more powerful than bleach, and yet without most of the undesirable side effects of using free-available chlorine-based products. You see, ClO₂ is tightly bound into a self-contained packet, delivered in water and able to do AMAZING things! Mixing and use instructions are important and must still be followed carefully to obtain the desired results.

APPLICATIONS FOR PRODUCT

HIGH CONCENTRATION APPLICATIONS

1 tablet to 16 oz of water

LOW CONCENTRATION APPLICATIONS

1 tablet to 32 oz of water

DIRECT TABLET USE APPLICATIONS

MOLD & MILDEW HAS MET ITS MATCH!

Mold? Mildew? What's the difference? How are they similar? Mildew is a kind of mold, both are fungi, they thrive in warmth, darkness, oxygen and moisture, and they can be black, white, gray, blue, green, brown, or yellow. Certain molds create mycotoxins that can harm humans and they emit MVOC's (Microbial Volatile Organic Compounds) that give them their typical odor. Since mold grows from microscopic spores that float in the air, it can end up growing indoors and being harmful to health, structures and interior/exterior building esthetics.

None of the above matters because **Eradicator** will take care of both the stains and the odor of the close to 300,000 species of fungi (CDC). Regardless of it being mold that can produce mycotoxins or not, all mold should always be removed. As long as the moisture source that helped it grow is eliminated, **Eradicator** will take care of moderate to heavy stains and odors associated with mold or mildew, for good.

APPLICATIONS FOR PRODUCT
