

FOREWORD

We live in challenging times. Carelessness in cleaning results in grave and costly health consequences. Everybody is worried with disinfection, but the truth is that germ control begins with clean surfaces (free from soil and bioburden) and clean air (free from microscopic volatile organic compounds). **Synergy Americas, Inc.** is contributing by developing a triad of products that will make a big difference. The **Dual-Use Dispenser** is where everything converges.

COMPONENTS

1. The **ENVIROTAB™ HOME CARE/PRO-TAB™** Combo: cleaning solution and cloth.

ENVIROTAB™ HOME CARE (24 tablets/box) is a tablet that, when dissolved in 1 qt (1 L) of water, generates a powerful, detergent-free, residue-free, general surface, chlorine dioxide cleaning solution. Soft on hand skin due to its low concentration, it is the ideal cleaner for all surfaces, except glass.

PRO-TAB™ is a compressed, rayon cleaning cloth in the shape of a tablet that maximizes storage space and that is machine washable/reusable, disposable/flushable/biodegradable, easy to transport, lint-free, and hypoallergenic. Rayon (or Viscose) is not damaged by chlorine dioxide solutions, so it is ideal for applying cleaners and ClO_2 -based disinfectants to surfaces.

2. **BIOBOMBS™ IAQ** Quick Release:

One of the most effective ways to clean and deodorize air is to deploy a **BIOBOMBS™ IAQ** tablet to quickly release ClO_2 gas that completely fills the space. **BIOBOMBS™ IAQ** tablets vary in size to clean and deodorize different volumes of space.

3. The **DUAL-USE DISPENSER**:

This is where the triad connects and makes sense for anyone who wants to maintain all surfaces and small spaces as clean and odor-free as possible.

WHO CAN USE THE TRIAD?

These products brought together are essential for any homeowner, business owner, property manager, contract cleaner, veterinary clinic, medical & dental clinic, small transportation (ride-share, taxi, etc.) service, fire, ambulance or police department. The **TRIAD** is a safe way to guarantee clean surfaces and spaces with optimal indoor air quality.

DUAL USE DISPENSER

WHY THE DUAL-USE CONTAINER AND NOT SOME OTHER CONTAINER?

Because of its size and convenience. We went to great lengths to pinpoint the correct size so that it can:

- Go anywhere: easy and practical to transport.
- Be used with both systems:

♦ **ENVIROTAB™ HOME CARE/PRO-TAB™** Combo: can contain and transport up to 14 **PRO-TAB™** Cloths hydrated and expanded with previously prepared ClO_2 solution using 1 tablet of Envirotab Home Care in 1 qt (or 1 L) of water. Expand only the cloths needed for the job and don't waste cleaner, disinfectant or cloths.

♦ **QUICK RELEASE FOR SMALL SPACES:** can be used with one 4 g (small bathroom, closet or small smelly area) or one 10 g (smelly 6' x 8' room) **BIOBOMBS™ IAQ** tablet (depending on size and degree of cleaning necessary).

DIRECTIONS FOR USE

CLOTH HYDRATION CHAMBER

Cover the bottom of the jar with only as many compressed cloths as required (up to 14). Add the prepared aqueous ClO_2 solution or any **Synergy™** solution as desired. Close the lid and allow to hydrate. Use cloths as needed.

SMALL SPACE DEODORIZATION

Half-fill dispenser with clear, lukewarm water. Drop either a 4 g (for totes or cabinets) or 10 g (for closets or small rooms) tablet and allow to gas off with the lid open for 1 hour. When complete, dispose down any drain.
