

SYNERGY™ SB

SOLUTIONS
FOR CLEANING

DESIGNED FOR
SMALL BUSINESSES
IN MEASURE-EASY
SQUEEZE BOTTLES
FOR ON-SITE CLEANING THAT IS
SIMPLY BETTER

OVERVIEW

The **Synergy™ SB Line of Products** for the cleaning industry has been successfully present in the market for many years, helping small and medium-sized businesses be more productive and profitable. It hasn't been easy to put together such a complete line of concentrated, high performance, low-cost, money-saving, easy-to-use products. There is a **Synergy™ SB** product for washing, cleaning, spotting, extracting or degreasing porous/non-porous hard and soft surfaces; automotive surfaces and materials; reflective or transparent materials; textiles, and fabrics. Two of our cleaners are even fortified with enzymes to aid in organic soil breakdown and deodorization. The Squeeze Bottle comes with a convenient 1 oz measuring cup for hassle-free dilution.

THREE PRODUCTS FOR HARD SURFACES ONLY

GLASS & SURFACE CLEANER

Is a highly concentrated, fast-drying and effective glass and hard surface cleaner. While suitable for virtually any hard surface cleaning application, this product is chiefly designed for use on glass, plastic, Plexiglas, mirrors, stainless steel & chrome reflective surfaces. Since it contains Isopropyl Alcohol, this cleaner can endure lower temperatures than most competitive concentrates. Being so concentrated (0.5 oz/qt), it is far more economical than most ready-to-use, competitive glass cleaning products.

Uses: Synergy™ SB Glass & Surface Cleaner can be used with a Pressure Foam Sprayer (no foaming additive necessary), a regular Pressure Sprayer and a Trigger Sprayer. Use indoors or outdoors.

Is a highly concentrated, bio-enzymatic product for cleaning virtually any surface AND sub-surface substrate. Use on floors, bathroom fixtures, kitchen appliances, waste containers, tables, walls, inside and outside of vehicles, buses, trucks, and even as a concentrated, bug-eating windshield washing solution. Its applications are nearly endless. Given its great versatility, **Synergy™ SB BioClean Plus** can be used in low concentrations for mopping or glass cleaning, and high concentrations for kitchen or engine degreasing. With a powerful fortification of beneficial bacteria and digestive enzymes, odor is kept under control for hours and even days after use.

Uses: Synergy™ SB BioClean Plus can be used with a Pressure Foam Sprayer (no foaming additive necessary), a regular Pressure Sprayer, a Trigger Sprayer, and in Windshield-liquid Containers.

BIOCLEAN Plus
ALL-PURPOSE
CLEANER
Fortified with Enzymes

CLING FOAMING ADDITIVE

Is a proprietary blend of surfactants and additives that doesn't react negatively with aqueous Chlorine Dioxide (ClO_2) and doesn't affect the efficacy of this amazing solution. This product has undergone thorough testing and has proved to be ideal for adding to any concentration of aqueous Chlorine Dioxide (from 50-500ppm) to create a clinging foam that readily suspends to vertical surfaces. This additive can make the perfect solution for cleaning and disinfection of food processing equipment, food transportation containers, or for doorway foaming equipment.

Uses: Synergy™ SB Cling may be added to ClO_2 solutions (made with Synergy™ Americas' ProDox, Securitab or Envirotab ClO_2 - generating tablets) in a 32 oz trigger bottle (foaming trigger recommended) or 48 oz pressure foam sprayer, in a proportion of 1 oz to 1 quart (or 1 Liter) of solution.

SYNERGY™ SB

SOLUTIONS FOR CLEANING

THREE PRODUCTS FOR HARD AND SOFT SURFACES

CAPTURE EXTRACTION CLEANER

Is a mildly acidic, yet powerful blend of soil-penetrating surfactants and natural deep-cleaning agents that work in harmony to quickly and easily remove soil from soft surfaces like automotive carpet and upholstery, without damaging the fabric or fibers, and with virtually no residue! **Synergy™ SB Capture** can also be used to extract dirt from car seats and carpets, or even as a microfiber cleaner & deodorizer for hard surfaces. **Synergy™ SB Capture** is fast-acting, non-toxic, non-corrosive, non-flammable and contains no phosphates.

Uses: Dilute in water in a spotter for extraction cleaning. Use in a pressure foam sprayer for surface cleaning with microfiber. Use in conjunction with **Synergy™ SB Soil Break** for fabrics/textiles.

Is a mild, yet powerful blend of soil-penetrating surfactants and natural deep-cleaning minerals that beat the soil out of soft surfaces like carpet and upholstery, without damaging the fabric or fibers and with virtually no residue! Use **Synergy™ SB Soil Break** also to spot clean car seats and carpets, or to pre-scrub the same ahead of fresh water rinsing and extraction. **Synergy™ SB Soil Break** is fast-acting, non-toxic, non-corrosive, non-flammable and contains no phosphates.

Uses: **Synergy™ SB Soil Break** can be used with a Pressure Foam Sprayer (no foaming additive necessary), a regular Pressure Sprayer and a Trigger Sprayer. It can also be used in the pressurized sprayer of the **Synergy™ Bonnit Bug** and for carpet cleaning with the **Synergy™ 3-D Bonnit System** and a low-speed buffer.

SOIL BREAK PRETREAT & DEEP CLEAN

CONSUME ORGANIC SOIL DIGESTER

Fortified with Enzymes

Is a powerful blend of beneficial, enzyme-producing bacteria. This product creates a non-detergent treatment for spots, stains, spills and odors that is unrivaled in its capacity to enhance cleaning, break down organic soils and eliminate all kinds of odors from carpets, upholstery, grouted tiles and other porous materials. How does **Synergy™ SB Consume** work? Enzyme and bacteria are nature's means of breaking down and eliminating all types of organic [food-based] soils, similar to the way in which we cut up a steak to make it digestible. **Synergy™ SB Consume** is fast-acting, non-toxic, non-corrosive, non-flammable and contains no phosphates.

Uses: **Synergy™ SB Consume** can be used in a pressure or regular trigger sprayer. It works as the first step to pre-treat food stains, followed by **Soil Break** to pre-scrub and then **Capture** to extract it all.

TARGET USERS:

- **Building Service Contractors-BSC**, as well as **Cleaning and Deodorizing Services** find the Synergy™ SB Line to be a brilliant tool for getting a job well done, to one-stop-shop, and to save big time in cleaning supplies.
- **Cleaning Supplies Distributors** can make a good profit carrying a thorough line of concentrated products and even selling the RTU diluted products for convenience.

WHY SYNERGY SB LINE OVER THE COMPETITION?

Simple. The **Synergy™ SB** Line costs between 1.2 and 2.4 cents per ready-to-use ounce, which generates businesses savings between 83% and 96%, compared to commercial products.
